## Introduction

This is a test using GitHub. I will also use it to make a report using some data. I will use the evals data to create some stuff.

## Exploratory data analysis

First of all, here is a pointless link to the introduction, just to show I can do it

Not worked for some reason. Anyway. This report will look for a relationship between beauty score and ethnicity using the evals data.

It is not written in a professional manner. It's just practice.

First of all, some summary statistics.

Table 1: Summary statistics on beauty score by ethnicity.

Ethnicity	Number	Beauty score	SD	1st Q	3rd Q	Min.	Max	Median
minority	64	4.58	1.47	3.333	5.08325	2.333	7.833	4.333
not minority	399	4.39	1.54	3.167	5.50000	1.667	8.167	4.333
